

**BP-07-C: Hypotension Avoidance < 55 during Induction,  
Open Cardiac**

**BP-07-C:** Percentage of patients where severe hypotension during anesthesia induction (defined as MAP < 55 mmHg) was avoided.

**Measure Time Period**

**Anesthesia Start** to **Surgery Start**

Instances where there are two blood pressure monitoring methods, the higher MAP will be used to determine measure compliance.

Artifact reading will be identified and removed from final measurement calculation. Artifact processing will occur according to the **Blood Pressure Observation** phenotype.
